Phone Conversation with Jeff Lauton  
June 1<sup>st</sup>, 1987

They have finished Wells UC-9 and UC-10

UC-9 is clear as far as goes to 238 ft.

At 203 ft at UC-10 - found TCE at 79 ppb and PerC 1800 ppb. At 238 ft - found perC 730 ppb and 58 ppb TCE. They finished well at 245 feet.

They did not bail UC9 or UC10.

On Thursday or Friday the 4<sup>th</sup> or 5<sup>th</sup> Solinst people will be out to install device in UC-10 and on the 15<sup>th</sup> for UC-9.

After the Solinst device is installed at UC-10 they will sample water - around Wednesday the 10<sup>th</sup>.

I will try to get someone from ESD out there to split them with them.

They spoke with Batt + Onfirst people regarding future work and we will have to wait a few weeks for approval from Unifirst. We should meet beforehand to discuss what they want so that they can start work plan earlier than if we wait for Unifirst approval.
